Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: The Applicant has put forth what is perceived as different from the way prior art has approached the compression scheme of data. Applicant has put emphasis on the discovery of some specifics of the source code which become predetermined basis or insight as to determining the common scope/patterns used in the differential encoding. Accordingly, this insight would help alleviate additional effort seen in most prior art--thereby expedite the targeted the compression scheme. The Examiner has reminded that all this teaching has to be explicitly disclosed in the specs and reflected in the claims; and noted that there is not sufficient description or distinct enablement about how this predetermination is made from reading the specifications; and Examiner has asked if Applicant can adjust the claimed invention so to put forth this teaching. Applicant has agreed to do some research in the ORIGINAL specs to go about this. Examiner has stated that only upon the claim being amended and resubmitted can a thorough examination be effectuated for patentability determination..
